

## Contents

- A. **Acknowledgements** I
- B. **Preface or “Why looking back?”** III
- C. **Emerging diseases: The threat of yesterday and today - a contribution of Prof. Dr. Hacker** IV
1. **As it began! The origin and threat of globalization** 1  
*Lost of paradise - travelers enlarge medieval horizons - seafarers discover the “rest of the world” and start trading - import of goods and epidemics - industrialization blows up the world - mankind becomes mobile - aristocratic societies are replaced by democracies - humans change their place in their selfunderstanding - racism is born and creates imperialism - fight against imported epidemics brings enormous knowledge in medicine - importance of expeditions.*  
**On a glimpse: Famous expeditioners, social scientific, political events in the years 1850-1920**
2. **Robert Koch, discoverer of anthrax, escapes his watery grave** 25  
*Robert Koch cultivates pure Bacillus anthracis - millions of losses - without treatment anthrax kills even today - the four postulates of Henle and Koch - Rudolph Virchow, the German Science Pope of his times, refuses Koch’s discoveries - discovery of the bacillus of tuberculosis, the threat and source of the century - expeditions to fight against plaques.*  
**On a glimpse: Anthrax, tuberculosis**
3. **Birth of the German “Colonial Empire”: April 24<sup>th</sup> 1884** 45  
*Austrian frigate ship “Novara” on travel around the world - internationalization of expeditions - Bismarck breaks his rejection to establish German colonies - pioneer Rochus Schmidt drinks own blood, when severely wounded - reporter of the “Cölln Journal” without health- or live-insurance among cannibals - the Neven-du-Mont mountain - abuse of power by colonial officers - good old and colonial England gives in 1912 the advice to Germany: do not take colonies.*  
**On a glimpse: Leeches, hidden vampirs**

## Expeditions into the empire of Plagues in early times of Globalisation and Global warming

- 4. Epidemic control in tropic colonies - hopeless? 69**

Bernhard Nocht gets his Institute for Tropical diseases at Hamburg - medical doctors in colonial services, their risks and income - short cuts in Health Services - Robert Koch stimulates public interests in tropical expeditions - malaria the deadly poisonous cloud over the lovely tropics - foundation of Tropical Institutes everywhere: France, England, USA etc.

**On a glimpse: Malaria, chinine = quinine**
- 5. Colonial and traveling fever 81**

Advertising for colonial tourism and the "Erika travel typing machine" - tests for expedition equipment - German army helmet as prototype of tropical helmets - Agar-Agar in kitchen and laboratory - copyrights on expedition photos - survival rule: keep quiet and remain emotionless - Dr. Kade's tropical pharmacy - life style on ship - native soldiers (askari) give protection to expeditions.

**On a glimpse: Protection from blood sucking arthropods**
- 6. The Cholera threatens Europe –again and again 107**

Koch's expeditions to Egypt and India - new culture media decide the scientific race with French scientists from Pasteur's institute - proof of agents of cholera disease in drinking water - with the train to Darjeeling highlands - von Pettenkofer is not convinced about Koch's discovery and tries to show harmlessness of cholera bacteria by self-infection-experiments.

**On a glimpse: Cholera, trachoma**
- 7. Sanitary officers as expedition staff 125**

The medical doctors Steuber and Fülleborn - scalpels and guns - doctors to the front - antimalaria drink: quinine and juice of wild lemons - blood probes from aggressive natives - Berlin painter on expedition - spitting snakes - biological research on volatile floats.

**On a glimpse: Blindness caused by snakes**
- 8. Fighting the plaque in the prime of his life 137**

Presentation of tuberculin-treatment - Koch becomes an international star - mid-life crisis- Koch falls in love with a teenager - the tuberculin crisis - India calls for help - epidemic of plaque "rush for the discovery of plaque in Hong Kong - proof of the agent of disease - flea as vector of plaque - the German plaque expedition in India - also "felix Austria" sends an expedition that "imports" plaque to Vienna - measurements to protect harbours from the "import" of infected rats and fleas - plaque in German East Africa - fight in German East Africa against cattle diseases - Germany sends a zeppelin-airship to transport quinine to Africa.

**On a glimpse: Plaque**
- 9. Koch, the epidemic specialist at the malaria front in New Guinea 163**

Studies of French, Italian and English physicians bring breaking news onto the mosaic of malaria knowledge - Koch organizes a German malaria expedition to Papua New Guinea - social sensation in the Germany colony: elder scientist is accompanied by "sexy" actress - experiments on quinine-prophylaxis - immunity to malaria - Koch's Geysir - what are man-eater? - Parkinson and his lethal disease - venereal diseases of natives - Salvarsan, the hope for the tropics.

**On a glimpse: Malaria, framboesia, syphilis**

- 10. Robert Koch infected as well** 191  
 Dempwolff continues malaria research and treatment in New Guinea - Koch suffers severely from malaria recidive - invitation of the English Government to study horse sickness and cattle fever - thoughts on jealousy of friends and competitors - award of the Nobel Prize for Medicine in 1905 - new expedition plans on sleeping sickness still "top secret".
- 11. First case of Creutzfeldt-Jakob Disease in New Guinea?** 205  
*German navy and expedition ship "Möve" - trepanations in the Pacific just to moderate headache - fever misinterpreted - Dr. Stephan's and missionaries deaths - patient in New Guinea with symptoms of disease described 15 years later in Germany by Creutzfeldt.*
- 12. Sleeping sickness expedition to German East Africa** 221  
 Sleeping sickness enters German protectorate East Africa - Germany sends an medical expedition under the guidance of Robert Koch - Mrs. Koch gets malaria - according to the findings of Sir David Bruce, who described Nagana = sleeping sickness of cattle, the Germans look for the agent of human sleeping sickness - work and living conditions in the field are hard - success is poor at the beginning - crocodiles are reservoir hosts - the tsetse-fly are now confirmed vectors - the German Atoxyl is successfully used as treatment on recommendation of the Liverpool Tropical Medical School - Atoxyl shows severe side effects, but saves thousands, who would have died - Robert Koch coming back from the expedition becomes "public star" - Bayer's Germanin B 205 = Suramin becomes drug of choice saving millions of people until now.  
**On a glimpse: Sleeping sickness, tungiasis**
- 13. Excellency produces excellency: Robert Koch and his congenial coworker Shibasaburo Kitasato** 247  
 Opening of Japan to European culture and human medicine - Kitasato comes in touch with German physicians - research stage at Berlin - discovery of agents of tetanus and plaque - fight against tuberculosis - Koch and Kitasato "produce" schools of excellent scientists working worldwide.  
**On a glimpse: Tetanus, diphtheria, yellow fever**
- 14. In memory Shibasaburo Kitasato - A contribution by Professors Takayuki Mori and Satoshi Omura, Kitasato University, Tokyo, Japan** 263
- 15. Foundation charters steamer for explorations** 271  
*General plan for the Hamburg-South Sea-Expedition - Fülleborn, the filarial worm specialist, directs the expedition in the first year - "armed" with only 105 bullets traveling into the inner of the nowhere - numerous filarial infections in the whole native population - second expedition year (1904 - 1909) directed by Krämer - strict management even at table - females on board - archaeological sensation on Lölö.*  
**On a glimpse: Tropical Elephantiasis**
- 16. As ophthalmologist and dermatologist in the South Seas - severe infections with filarial worms** 293  
*Koch's pupils Alfred Leber and Stanislaus von Prowazek go south and become infected by filariasis - first discoveries in important tropical eye and skin diseases - make the tropics crazy? - death of von Prowazek - famous painter Nolde gets in contact with explorers, becomes romantic and plans participation in expeditions.*  
**On a glimpse: Gonorrhoea**

## Expeditions into the empire of Plagues in early times of Globalisation and Global warming

- 17. Last German expedition to New Guinea with famous expressionistic painter Emil Nolde 317**  
*Why does the population die in the "paradise" of South Seas? - tropical diseases everywhere - Ludwig Külz becomes a renown researcher and physician in the "dschungle"- ophthalmologist and expedition chief Leber cannot avoid death of expedition participants - famous painter Emil Nolde works gun-protected - famous tropical agricultural expert Georg Zwanzger becomes station leader and expeditioner - physicians, agriculturists and even poets become prisoners of war.*  
**On a glimpse: Onchocerciasis, typhoid fever**
- 18. Assassination in Sarajevo – World War I and the end of the German Colonial Period 363**  
World shocked by war - English troops seize the German South Sea-protectorates - German money has no more value - German scientists, painters and expeditioners are driven in the wind and die abroad - painter Nolde is hold in Port Said.
- 19. Expedition members on the run 369**  
*New walking line in expeditions - expeditioners are eaten up - others become prisoners of war of the British or are on the run hiding among native population - bitter finding of the end of the war: loss of all reports and equipment - expeditioners accused by the British administrator - other expeditioners manage to escape by canoe - escape to Germany via USA - others make their way to Sumatra and join the German Army as medical staff - death due louse born spotted fever - fate of painter Nolde and its dream of the South Sea - Leber is lost - British Military Intelligence opens fundus 75 years later and brings news on the Guinea expeditions - but much experience is lost for ever - in Second World War fate of lost expeditioners is repeated.*
- 20. Kuru - the "laughing death", legacy of the colonial age? and bovine spongious encephalopathy (BSE) - the threat of our days 383**  
*"Whirling disease" known since long in New Guinea - later Nobel Prize winner Gajdusek describes "shaking disease" locally called "kuru" among cannibals - hidden movie of cannibalism - cannibalism also among World War II troops - symptoms of BSE, kuru, scrapie and von Creutzfeldt-Jakob-Disease are identical - what are the infectious agents? - last case of kuru in New Guinea - really for ever?*  
**On a glimpse: Prions and related encephalopathic diseases - a contribution of Prof. Dr. Aguzzi**
- 21. What is still relevant today? Are there new threats from globalization and global warming? Yes, yes, yes .....we are walking on thin ice. 411**  
Old scourges became demystificated - what are threats of today - which are diseases that lure at the gates of Europe and North America or have they already entered? - have malaria and leishmaniasis a chance? - what about AIDS, SARS, Bird flu, Human Influenza, Pig (=new) flu, Yellow fever or Dengue- and West Nile fever? Has Crimean-Congo-fever a chance? Blue tongue disease: from 0 to 100 in one year.
- 22. Literature and citations 427**
- 23. Origin of figures 441**
